AMD Athlon 64 FX processors power the next innovation for the enthusiast PC platform: The AMD Quad FX platform with Dual Socket Direct Connect Architecture. The Revolutionary AMD Quad FX platform is the first dual-socket, multi-core PC platform designed to take advantage of the latest enhancements in Windows Vista™ Ultimate and for megatasking PC enthusiasts and power-users who run the most demanding tasks simultaneously. The AMD Quad FX platform with Dual Socket Direct Connect (DSDC) Architecture is ready for the most demanding multi-threaded digital content creation software and for the next wave of incredibly demanding multi-threaded games.

DSDC Architecture is AMD's exclusive high-bandwidth interconnect for two AMD Athlon 64 FX processors. The AMD Quad FX platform featuring two AMD Athlon™ 64 FX dual-core processors with DSDC Architecture for megatasking can double your digital media application performance over two core platforms. Adding another processor doubles the cores, doubles available memory bandwidth—up to 25.6GB/s, and doubles the amount of high-speed on-die cache.

With the AMD Quad FX platform you are ready for the multi-core, multi-threaded future. The AMD Quad FX Platform is designed to offer a seamless upgrade path from dual-core processors to quad-core processors. This offers an advanced four core platform today and a planned eight core platform in the future. We expect that Megatasking is the future reality of PC performance. Explore

AMD Balanced Smart Cache provides better support for multi-threaded environments with high-speed cache on all four cores.
