# **Professional Experience**

## Sept 2011 – Present:

Advisor: Dr. Neil Gehrels, Goddard Space Flight Center

#### • Research:

- 1. Exploring the connection between gamma-ray bursts (GRBs) and supernovae via multi-messenger observations. In particular, we developed a code that is capable of creating mock GRB light curves and simulating the BAT trigger algorithm. We use the code to study intrinsic GRB characteristics.
- 2. Making forecasts for the future GRB/transient telescope, the Transient Astrophysics Observatories (TAO), and exploring optimal survey strategies to maximize detections of high-redshift GRBs and nearby short GRBs, which are potential counterparts of gravitational wave events.

## • Supporting tasks for *Swift*/BAT:

- 1. GRB-related tasks: Data analysis for the BAT-detected GRB, maintaining and updating the GRB catalog website (<a href="http://swift.gsfc.nasa.gov/results/batgrbcat/">http://swift.gsfc.nasa.gov/results/batgrbcat/</a>).
- 2. Maintaining the BAT hard X-ray transient monitor scripts and webpages (<a href="http://swift.gsfc.nasa.gov/results/transients/">http://swift.gsfc.nasa.gov/results/transients/</a>), and providing data to HEASARC for public use.
- 3. Providing BAT data analysis when required, and offering help for users who have questions regarding the BAT analysis.
- 4. Maintaining the BAT-team machines, arranging shifts for the BAT burst scientists and the Goddard burst advocates.
- 5. Writing new automatic scripts for new requests for the BAT operation, including prompt data search following gravitational wave triggers.

## Jan 2007 – Aug 2011

Advisor: Prof. Brian Fields, University of Illinois at Urbana-Champaign

 Code development for detailed forecasting of core-collapse supernova detections for major future surveys in both optical and radio wavelengths, and exploration of science potentials of the detections, such as precision measurement of the cosmic supernova rate and the diffuse supernova neutrino background, and probing failed supernovae via multi-messenger observations.

#### May 2006 – Dec 2006

Advisor: Prof. Joseph Mohr, University of Illinois at Urbana-Champaign

• Code development for mock observations for the galaxy cluster search of the Dark Energy Survey, and seeking the optimal filter for galaxy cluster detections via SZ Effect.

#### Jun 2004 – Dec 2004

Advisor: Prof. S. K. Lai, National Central University (Taiwan)

• Adaptation of molecular structure code to find minimum potentials for iron molecules.
