

## Art 375 --- Project #1 Screen Print Edition

This semester you will be required to integrate multiple print process with each other. Meaning that a given process will be used again further in the semester with another processes. Your subject and/or content will be limited so that you will be able to solve the technical issues and be able to complete the combination of image and process in a reasonable amount of time. To facilitate this I am limiting your imagery to what may seem like a rather narrow field. However there is a tremendous amount of room to find path to be creative with the given subject matter.

Ok so the challenge for you is to select a letter from the alphabet.  
It can be any letter in the alphabet A---Z  
It can be upper case or lower case.  
It can be any font that you feel draws you in.

The other icon that you will have to work with is a single digit number.  
It can only be a single digit meaning any number from 0 to 9  
It again can be any font you are attracted to.

Take some time make your choice to create some sketches of the letter and number with various combinations,

- Repeat them,
- Over lap them
- Do them as outline
- Have them interlocking.

The best program to develop these images is a vector---based program like Illustrator. This way you will have very clean edges and you will not have to worry about resolution issues like you do when working in Photoshop.  
You can look at an example of the type and number alterations
